What are Sparklines

Sparklines are mini charts displayed in cells

- Used to quickly visualize the data
- Drawn to the cell background
- Independent from the cell content

Types : Line, Column, Stacked

Visualises data of an input (data) range into an output cells

Sparkline Groups

Sparklines are grouped into sparkline groups

- Same properties for different data (different data range)
- Each sparkline has at least one group
- A group has properties that define how it will be displayed

Sparkline Group Properties

Sparkline group properties

- Series color
- Show points and point colors
 - negative, high, low, first, last
- Show marker and marker color
- Display hidden (boolean)
- Right-to-left (boolean)
- Display X Axis (boolean)
- Vertical minimum and maximum
 - Individual, group, custom
- Display empty cells
 - gap, zero, span

Sparkline Properties ✕

<p>Properties</p> <p>Type: Column ▼</p> <p>Line width: 0,75 - +</p> <p>Display empty cells as: Gap ▼</p> <p><input type="checkbox"/> Display hidden</p> <p><input type="checkbox"/> Right-to-left</p> <p>Axes</p> <p><input type="checkbox"/> Display X axis</p> <p>Vertical <u>m</u>inimum: Individual ▼ 0 - +</p> <p><u>V</u>ertical maximum: Individual ▼ 0 - +</p>	<p>Colors</p> <p>Series: #376092 ▼</p> <p><input checked="" type="checkbox"/> Negative points: #FFC000 ▼</p> <p><input checked="" type="checkbox"/> High points: #92D050 ▼</p> <p><input type="checkbox"/> Low points: #D00000 ▼</p> <p><input type="checkbox"/> Marker: #D00000 ▼</p> <p><input type="checkbox"/> First point: #D00000 ▼</p> <p><input type="checkbox"/> Last point: #D00000 ▼</p>

Help
Close
OK

Implementation

- **Add Sparkline model and cell storage**
- **ODF support for importing and exporting**
 - Extended ODF / LOExt namespace with new elements and attributes
- **OOXML support for importing and exporting**

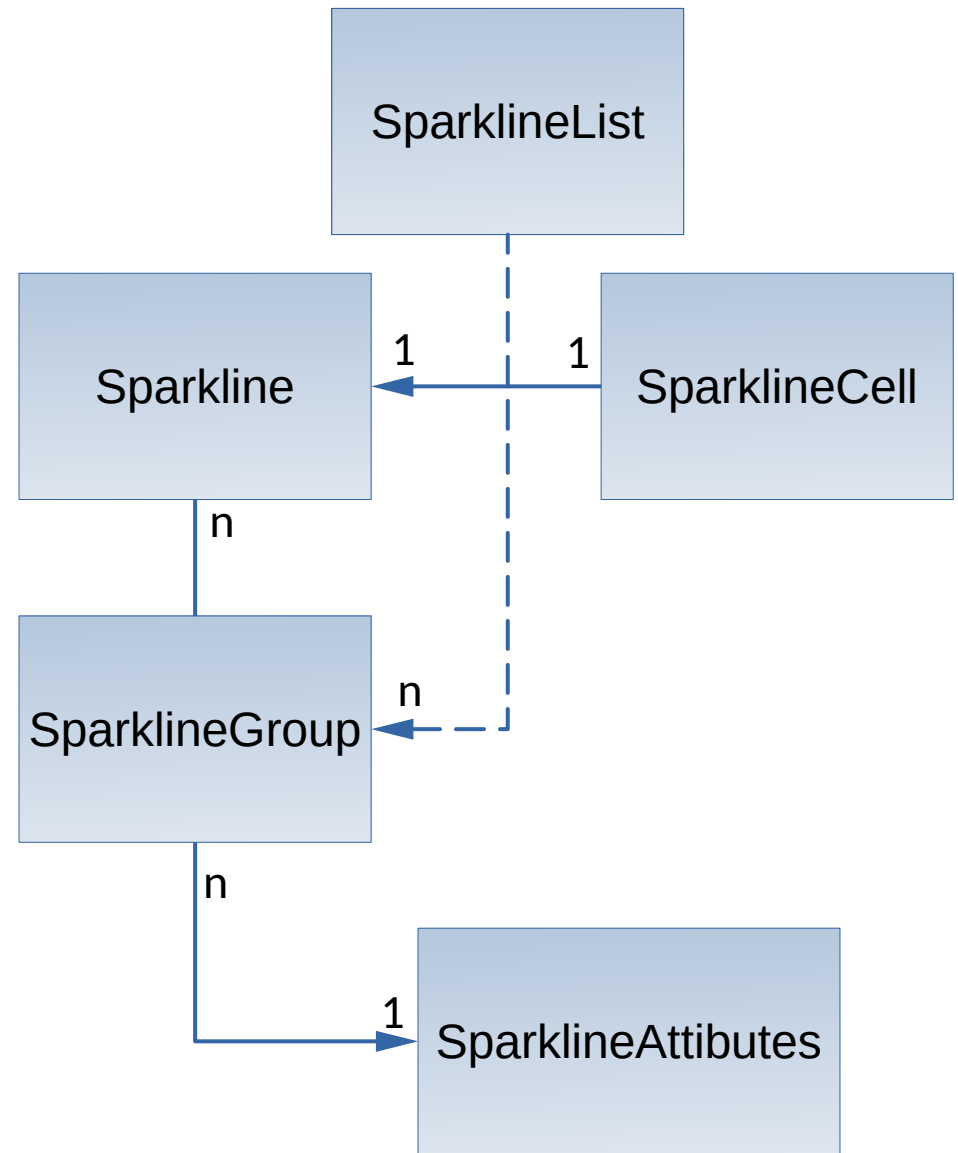

Class Diagram

Class Sparkline

- Connects to a SparklineGroup
- Has the data range and output cell

Class SparklineGroup

- Holds an instance of SparklineAttributes

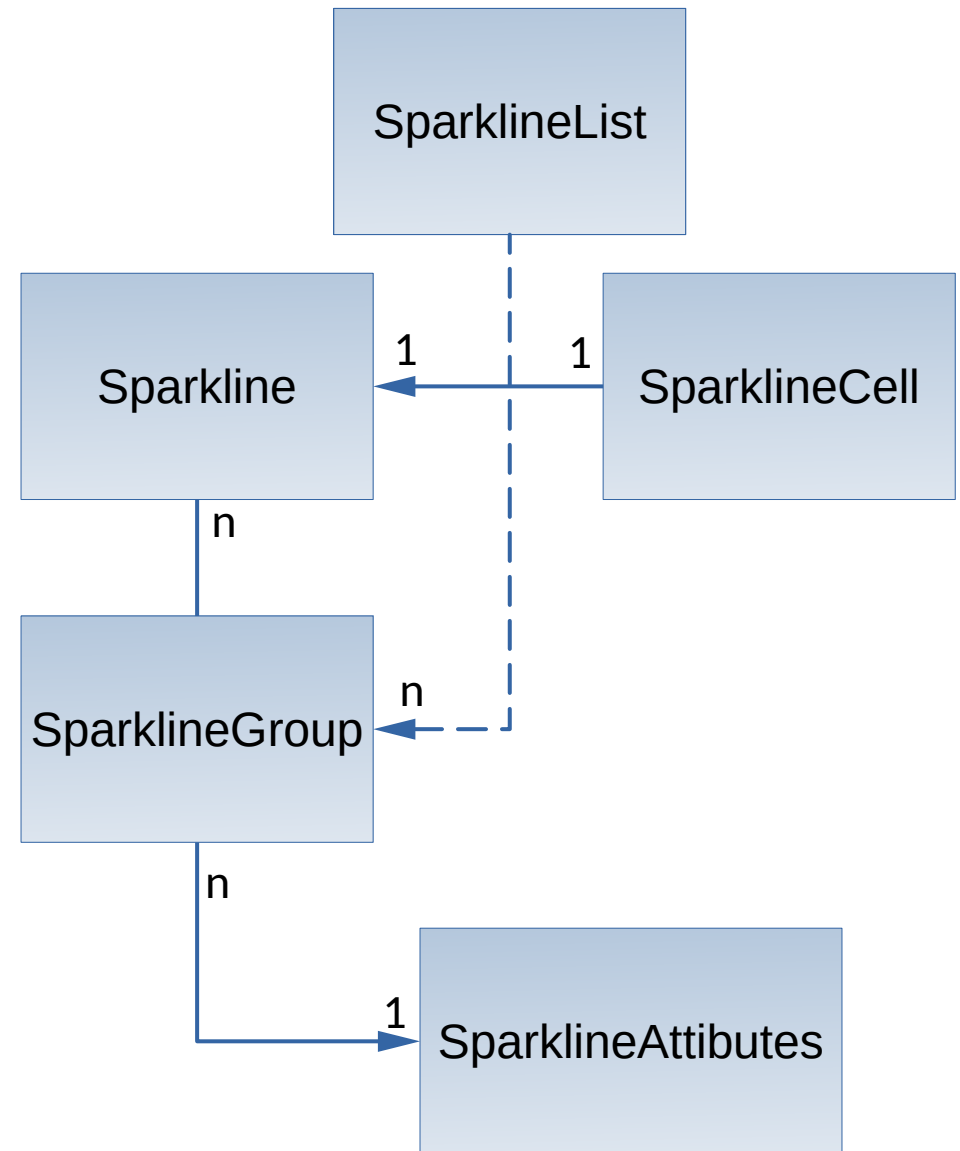

Class Diagram

Class SparklineList

- Provides access to Sparklines and SparklineGroups
- Holds a weak to SG
- Main entry point to access from OOXML and ODF filters

Class SparklineAttributes

- Holds all sparkline attributes
- Copy-On-Write
- Useful for Undo/Redo

Cell storage of a Sparkline

- SparklineCell class to just hold a shared_ptr to Sparkline
- A new multi_type_vector for Sparklines (holding SparklineCell class)
 - Instance on the Column object
 - One instance of the multi_type_vector per column

Undo / Redo

- For main actions on Sparklines and SparklineGroups
- UndoGroupSparklines, UndoUngroupSparklines, UndoInsertSparkline, UndoDeleteSparkline, UndoDeleteSparklineGroup, UndoEditSparkline, UndoEditSparklineGroup
- Uses principle of positive and reversible actions
 - Executes the action means to runs redo
 - Only the relevant changes are stored in the UndoAction

Chart Data Table

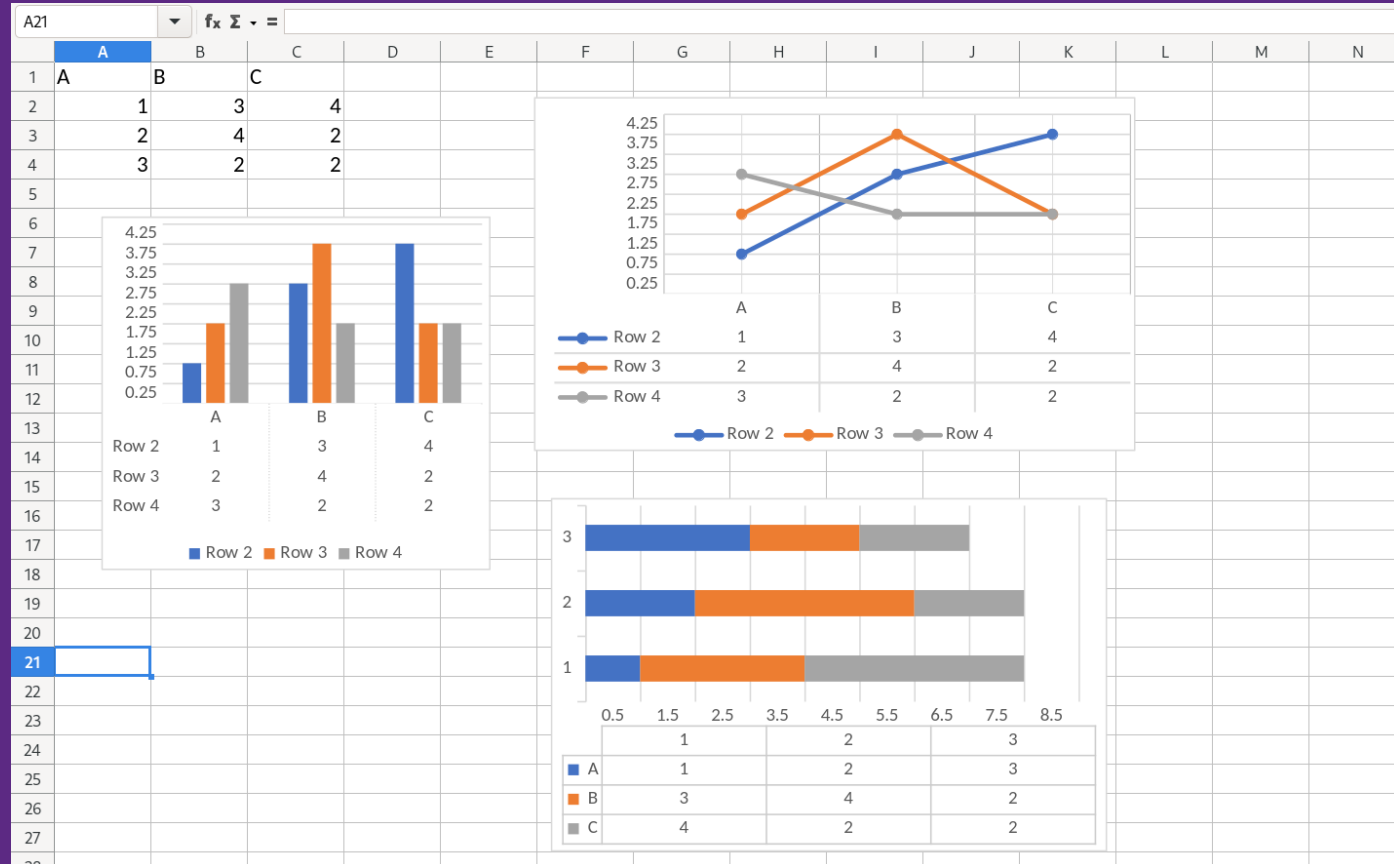

Chart Data Table

Presents a data table inside a chart area

- Same data that is visualised by the chart

Positioned automatically

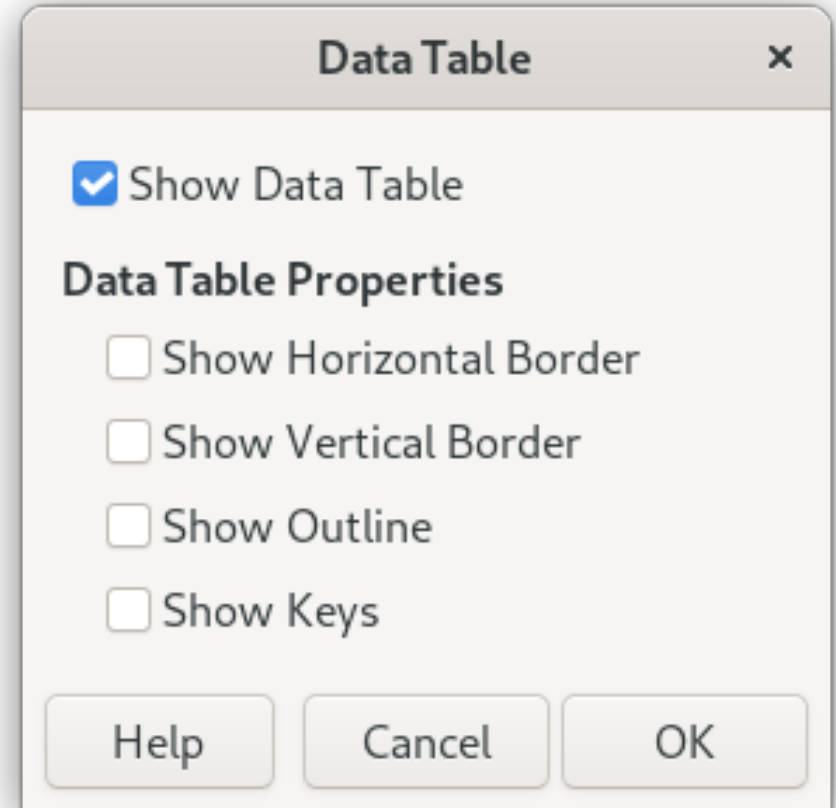

- Positioned below x-axis of the chart
- Can replace x-axis labels for some chart types

For compatibility with OOXML

Data Table Properties

Data table properties

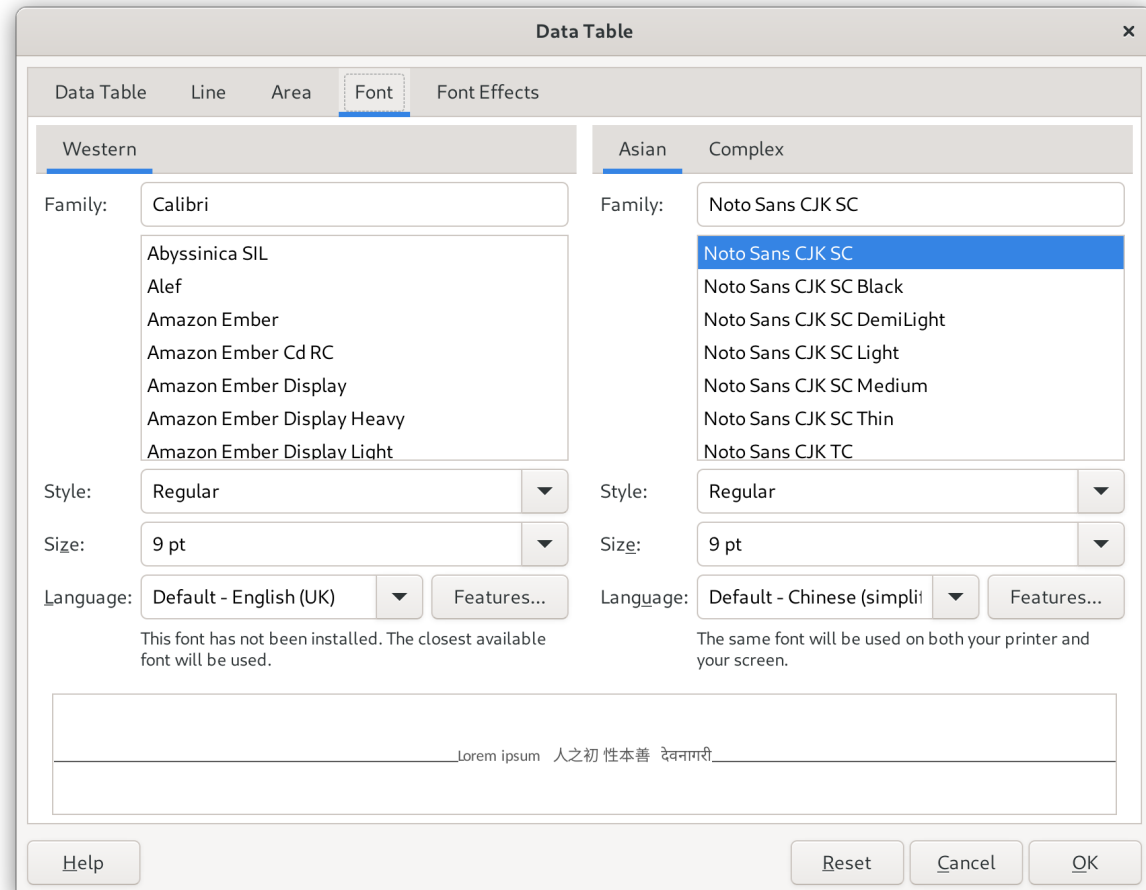

- Show horizontal border
- Show vertical border
- Show Outline
- Show Keys

Data Table Properties

Reusing

- Line properties
- Fill properties
- Text properties
- Defines the look of the table

Implementation

DataTable class as the model

- Holds the properties
- Data table properties
 - Horizontal, vertical border
 - Outline
 - (Legend) Keys
- Holds text properties, fill properties, line properties

DataTableView class

- Responsible for rendering
- Reuses the table shape and maps the properties

Undo / Redo

Chart Undo/Redo always copies the whole model

- All that DataTable needs to support is ability to clone itself
- Then Undo / Redo already works out-of-the-box
- But this could be memory expensive

Thanks !
